

Stories of Hope and Second Chances

Wondering why it's so vital that we raise funds for our mission?

Here are just a few stories that show the impact your donations have, and the real difference you can make to cats in need...

Carlo Rossi

was a 7-month old kitten brought into our care with long untreated infections, requiring the removal of both his eyes, and a broken jaw that healed incorrectly.

Toronto Cat Rescue provided the medical intervention that saved his life and helped him become the playful and capable young cat he is today! ❤️

Indira

came to us pregnant and with an old, untreated femur fracture. We were so worried she'd need the leg amputated after the birth of her kittens, but luckily the veterinary specialist informed us it wasn't needed in the end!

Her once desperate existence has transformed into a life with little pain and lots of joy! Her four beautiful kittens are also in new homes and living their best lives! 🐱🐱

Ali

arrived at a local shelter with a fractured femur, before being brought to Toronto Cat Rescue.

We rushed him to a veterinary specialist where it was discovered that he had an enlarged heart and a murmur. After \$10,000 of medical expenditure, he has a clean cardiac bill of health and is living a healthy and happy life 💪

Matthew

was found by a jogger, tied up in a bag and left near a river. Luckily, he found his way to us and we provided the care, vaccines and medical treatment he needed.

Matthew now has a happy fur-ever home with incredible adopters Drew and Ashley 🏠

He even has a new brother too! 🐱🐱

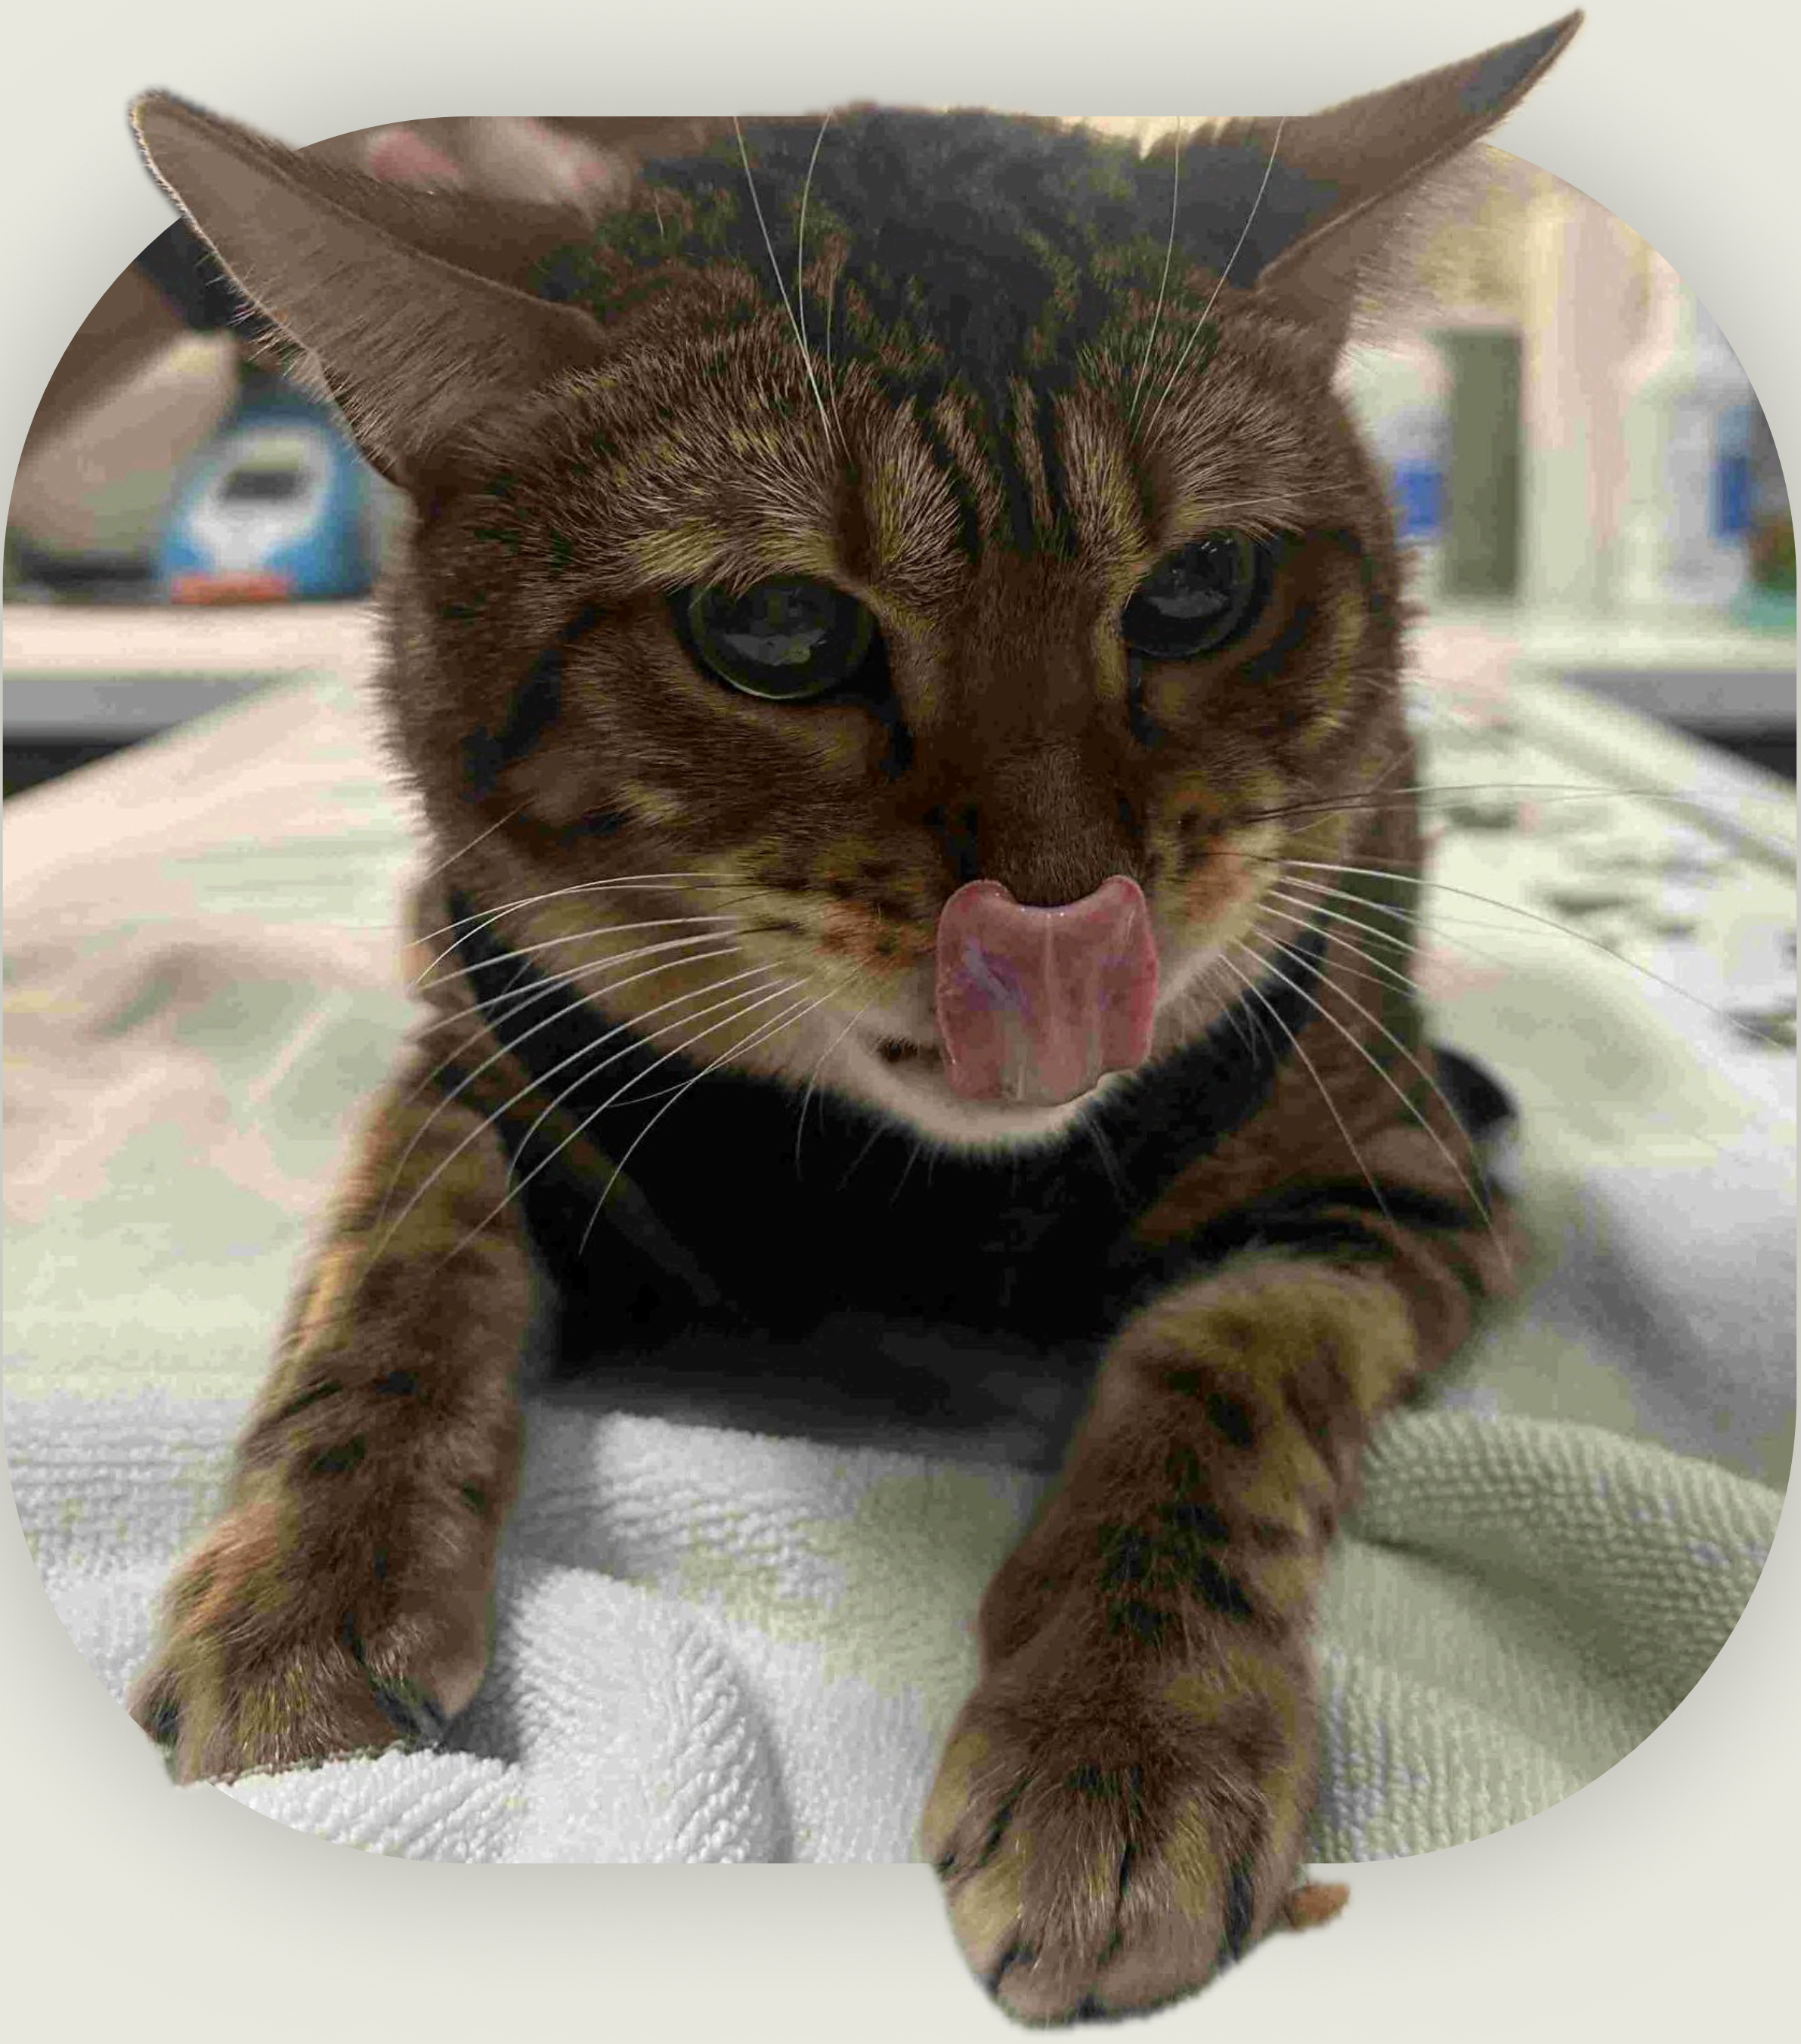

Dougie and Kenny

arrived at a rural shelter and had little chance for adoption until we took them in. Dougie needed significant dental care and Kenny was in the early stages of kidney disease.

We know that senior cats, whose medical conditions can be identified and treated, make great companions.

Medical intervention for seniors are usually quite expensive, but it's worth it if it helps and older cat become a cherished members of a new family ❤️

Betty

broke her left tibia after falling from the high height and sustaining very bad injuries.

We intervened to stop her from being euthanized, which was about to happen because of the very high costs of orthopedic surgery.

Now? After a surgery costing more than \$10,000, she's healthy, happy and adopted into a loving family. 🐱❤️

Thank you for your support !

**Toronto Cat Rescue will always to step in
to rescue any cat needs our help**
